VISUAL LUBRICATION MANAGEMENT SYSTEM

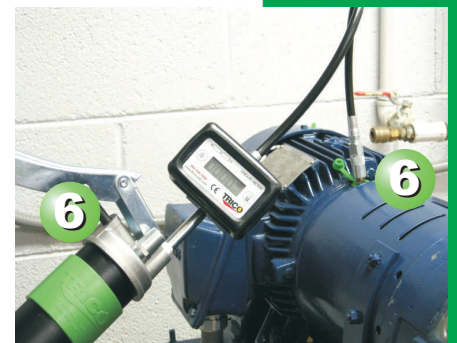

A SOLUTION TO MANAGING LUBRICANTS FROM STORAGE TO POINT OF USE.

The Spectrum System uses color-coded wall charts, identification tags and labels, and storage, handling, dispensing containers and equipment to ensure that the correct lubricant is used in the right piece of equipment, and in the proper location.

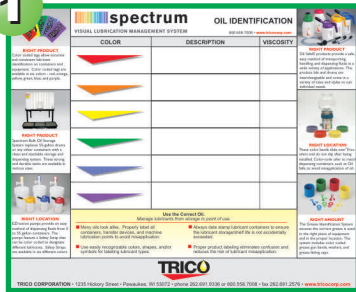

The Spectrum System should be implemented the moment lubricants are received in inventory all the way through the lubricant supply chain including storage, application, and disposal. All equipment such as transport containers, hand pumps, filter carts, transfer carts, dispensing equipment and tools should be labeled to match the lubricant. A visual lubrication management system will assist in helping employees understand the internal supply chain ensuring that the right lubricant gets to the right application.

Visual management should be applied through out the lubrication supply chain.

1

SPECTRUM WALL CHARTS

Spectrum Wall Charts provide a rewritable surface for designating colors to specific lubricants. A felt tip marker can be used to record the lubricant description and viscosity next to the appropriate color. The designated color should be used throughout the facility for that particular lubricant. Laminated wall charts measure 36"W x 28"H and are available in two versions for identifying greases and oils.

2

SPECTRUM TAGS AND LABELS

A simple and fast solution for identifying lubricants, containers, lubrication points, equipment, and/or anything else you can think of. These durable 2"W x 4"H tags are chemical and weather resistant. Use a felt tip marker or a Spectrum customized label to mark the tag with your information. Then simply seal the information beneath the laminate sheet to keep it clean and legible. The Spectrum labeling system allows you to create customized labels using various colors, text, and **optional barcoding** for your specific requirements.

Available in **10** colors

3

SPECTRUM BULK OIL STORAGE SYSTEM

These bulk oil storage systems replace 55-gallon drums or any other container with a clean and stackable storage system. The tanks are constructed of high-density polyethylene and are available in 70, 121, 145, and 230 gallon tanks. The translucent tanks have volume markings molded into them in gallons and liters to allow visual monitoring of fluid levels. All storage tanks have unique grooves that interlock to secure tanks in place when stacked. A unique cut-out area allows the lower tanks of a stacked system to be filled as well as providing a safe and secure area for a desiccant breather.

4

EZI-ACTION DRUM PUMPS

These pumps provide an easy method of dispensing a wide range of liquids from 5 to 55 gallon containers. They provide effortless flow of viscous fluids up to 8,800 cps. The pumps feature a safety strap, which locks the handle in the closed position. Optional color-coding of the safety strap, when used in conjunction with fluid transferring and dispensing containers, minimize the risk of cross-contamination and ensures the right lubricant is used in your equipment.

Available in **6** colors

5

OIL SAFE® CONTAINERS

These products provide a safe, easy method of transporting, handling, and dispensing lubricants in a wide variety of applications. Oil Safe products are durable and built with High Density Polyethylene to perform in hostile environments. The product lids and drums are interchangeable and come in a variety of sizes and styles to suit individual needs.

Available in **10** colors

6

SPECTRUM GREASE IDENTIFICATION PRODUCTS

The grease identification system uses different color grease fitting caps, washers, and grease gun bands to ensure that the right product gets applied to the right location. The grease fitting caps and washers are available in two sizes to fit 1/8 NPT or 1/4-28 grease fittings. The grease gun bands slide over standard grease guns and do not slip after being installed.

Available in 6 colors

7

OPTO-MATIC COLOR BANDS

These color collars slide over the upper casting of Trico's Opto-Matic Oilers and Closed System Oilers for easy identification of lubricant type. Color-code constant level oilers to match lubricant dispensing containers, such as Oil Safe®, to avoid cross-contamination and misapplication of lubricant.

Available in 6 colors

Uniform color scheme throughout the plant.

- Color-coded wall charts with product description and viscosity
- Color-coded tags and labels to clearly mark lubricant and equipment
- Color-coded storage, handling, dispensing equipment and containers to easily identify products
