

## Dam Flood Control Gate Lube Installation Raymond, CA 93653

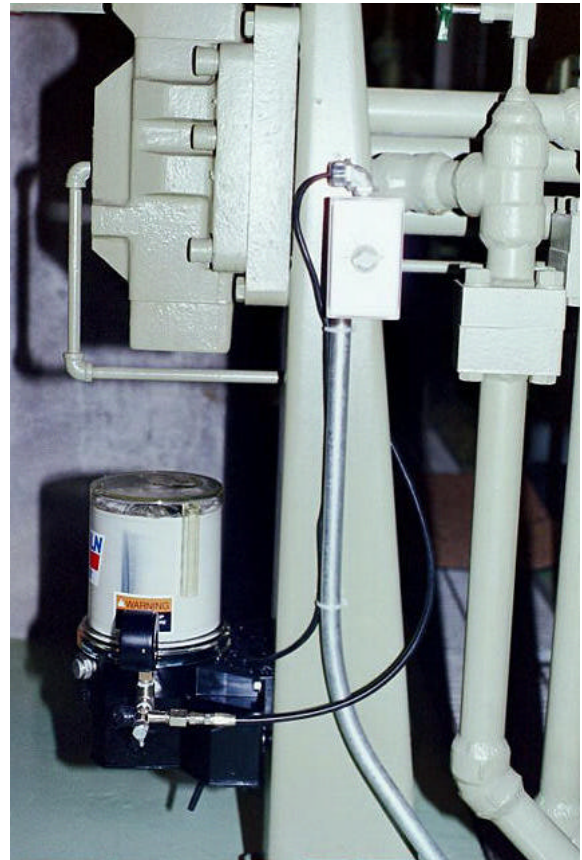

Dean Industrial Enterprises installed Lincoln 2-Liter QuickLub® pumps to lubricate ten points on each of four Flood Control Gates in the control tower. During gate operation, the timer activates the pump, lubricating the slides on both sides of the gates.

Two gates showing divider valves metering grease to each individual point.

Close up of Divider Valve with lines going into five grease points on each side of the gate.

View of pump and controller mounted on support bracket next to a gate. As the gate is moved, the system is activated lubricating the slides of the gate. The system can be installed during gate operation.

Contact Steve Sigle at Dean Industrial for more information .
